Barham. 1639.

A Prognostication for the yeare of our Lord God, M. D C. XXXIX.

Drawne from the motions of the Supreme and luminous bodies and their positions to this Globe of the Earth.

By WILLIAM BARHAM.

Whereunto are annexed certaine *Tables* and other things both profitable and usefull.

As also all the Faires in England where they be kept.

LONDON,
Printed for the Company of Stationers. 1639.

Of the Eclipses that will happen this Yeare. 1639.

THe two great Luminaries, the *Sunne* and *Moone* will suffer foure *Eclipses* this yeare, 1639. two of the Sunne and two of the Moone.

The first will be of the *Sunne* on the 22. day of *May*, being Wednesday, the Sunne and Moone being neere the *Dragons tayle*, in the 10 degree of *Gemini*.

The beginning, at 3 a clocke 45 min. } afternoon.
The middle, at 4 a clock and 45 min. } afternoon.
The end, at 5 a clocke and 38 min. } afternoon.

So the whole Continuance, is one houre and 54 min. The digits Eclipsed will be 10 Digits and $\frac{2}{3}$. parts, upon his Northerne or upper part.

The second Eclipse will bee of the *Moone*, on the fifth day of *June*. Shee will be seene to be wholly eclipsed except one Digit of her upper edge, by the inhabitants of *Mexicana*, the Ilands of the South Sea, *Tendue*, *China*, *Tartary*, *East India*, *Persia*, &c. Shee will be out of her Eclipse in the Afternoone, before she arise to us.

The third, is of the *Sunne*, November the 14. to those that are farre beyond the Line, the Sun shall appeare almost wholly Eclipsed, on his Nor-

Northerne or lower part, but to us it cannot be ſeene.

The fourth is of the *Moone*, on the 20 day of *November*; The inhabitants of the Eaſterne parts, as *China*, &c. ſhall ſee her to looſe almoſt a third part of her bredth upon the North ſide; ſhee will recover her light a little before-noone, and therefore long before ſhee ariſeth to us, ſo that wee ſhall ſee no part of that Eclipſe.

The deſcription of the foure Quarters of this preſent Yeare. 1639.

Firſt of the Winter Quarter.

The Winter quarter tooke its beginning the 11 day of December in the laſt yeare 1638, at which time the Sunne entred into the firſt minute of the tropicall Signe Capricorne, the Sun then being at his farthеſt diſtance and greateſt South declination, making then the ſhorteſt day and longeſt Night. This quarter continueth vntill the 10 day of March, during which time, the Sunne in his naturall motion paſſeth through theſe three Signes, Capricorne, Aquarius, and Piſces.

Of the Spring Quarter.

THe Spring quarter taketh its beginning the 10 day of March, at which time the Sunne entreth into the first minute of Aries, then making twelue houres Day, and 12 houres Night throughout the world, except it be vnder the Poles. This quarter continueth vntill the 11 day of Iune, in which time the Sunne hath his progresse through these three Signes, Aries, Taurus, and Gemini.

The Summer Quarter.

THe 11 day of Iune the Sunne entreth into the first minute of Cancer, at which time our Summer taketh its beginning, making then our longest day and shortest night, causing then the Fruits of the earth to draw towards their ripenesse, and this is the Longest day to all those that doe inhabite on the North side of the Equinoctiall line, and the shortest day to all them that inhabite beyond the Line to the Southward. This quarter continueth vntill the 13 day of September, during which time the Sunne declineth toward the Equinoct, and maketh his progresse through these three Signes, Cancer, Leo, and Virgo.

The Autumnall Quarter.

THe Autumnall quarter beginneth the 13 of September, at which time the Sun entreth the first point of Libra, making then againe the

Dayes

Dayes and Nights of an equall length throughout the world. This quarter continueth vntill the 11 day of December, during which time the Sunne declineth towards his Southerne tropique, and passeth through these three Signes, Libra, Scorpio, and Sagitarius.

Astronomicall Elections for Physick and Chirurgerie, depending on the Course and Place of the Moone passing vnder the 12. Signes of the Zodiack.

WHen euill and superfluous humors doe abound in thy body too much, then is it thy safest course to finde the true Cause from whence they spring, and truly to consider, whether it be fit for thee to bleed or not; for the time and other Circumstances not being sufficiently weighed, may be most dangerous to the patient; of which no vnderstanding Physitian can be ignorant, for it giueth aduantage to many grieuous Infirmities.

But when necessity vrgeth, as for the Calenture, Phrenzy, Plurisie and such like violent diseases; then though the time and place of ☽ Moone be vnfit, yet ought it not to be delayed, but spedily to be done.

This consider also of Medicines, that some be

Purgatiue, some Confortatiue, and some meane, betweene both. Purgatiue medicines be, either Solvendo, or Leniendo; for the first, the Moone must be in Cancer, Scorpio, or Pisces: for the other, it must be taken when the Moone worketh more in moistnesse then in drynesse, being in a ✶ or a △ aspect with Mars; and heed must be taken also, in the houre when Physicke is giuen, least the Moone haue any aspect with Saturne, for he congealeth the humors, making the Medicine to worke but little.

Further, in all Purgatiue medicines, obserue these ensuing rules.

The ☽ in ♋, in ✶ or △, with —
- ♀ Purge Choler
- ☉ Purge Phlegme
- ♄ Purge Melancholy

} With Electuaries.

The ☽ in ♍, in ✶ or △, with —
- ♀ Purge Choler
- ☉ Purge Phlegme
- ♄ Purge Melancholy

} With Potions.

The ☽ in ♓, in ✶ or △, with —
- ♀ Purge Choler
- ☉ Purge Phlegme
- ♄ Purge Melancholy

} With Pilles.

The ☽ in ♎ or ♒, in ✶ or △, with
- ♀ Purge Choler
- ☉ Purge Phlegme
- ♄ Purge Melancholy

} With any kind of Medicine.

But let not the Moone be in Aries, Taurus, nor Capricorne, for then the Medicine will stay but a short

thort time with the Patient, making him apt to fall it up againe, unleſſe you doe intend to purge by Vomit. Alſo in purging the Melancholy, let not Saturne haue dominion, nor Iupiter, in purging the Sanguine or the Liuer, nor Mars in purging the Cholericke, nor Luna the Head, nor Mercurie the Lungs.

Rules for Blood-letting.

IN letting of Blood you ought to know what perſons are fit to bleed, and what not; and if they be fit to bleed, then to know how it is with the Patient inwardly, and to his Complection and Age outwardly, and for the time of the yeare, the place of the Mone, and his Diet.

For Complection.

For the Phlegmatick, the Mone in Aries, or Sagitarius, when you open a Veyne.

For the Melancholy, in Libra, or Aquarius.

For the Cholerick, in Cancer, or Piſces.

And for the Sanguine, in any of the Signes aforeſaid.

For the Age.

Let blood in Youth, from the Change of the Mone to the firſt Quarter.

In middle Age, from the firſt quarter to ỳ full.

In elder Age, from the full to the laſt quarter.

In old Age, from the laſt quarter to ỳ Change.

For the Time of the yeare.

The Spring is the best, Harvest or Autumne indifferent, the rest of the yeare is either too hot or too Cold, and is not bled but upon necessity.

For the time of the Moone in letting Blood.

Let not Blood within three dayes before or after the Change of the Moone, nor within 24 houres before nor after the Full, nor the Day before nor after the Conjunction of Saturne Luna; the like observe in the Conjunction of Mars Luna; nor let not Blood, Venus and Luna in ☌, while Venus is Combust.

The Moone in any Aspect with Saturne or Venus not Combust, or in a Sextile or Trine with Sol or Mars, produce fit times to let Blood in.

The time of the Day most fit to let Blood in.

The Morning fasting is best, or in the Euening after perfect digestion, prouided that the ayre be temperate.

Such persons as be not fit to Bléed be they that be aboue the Age of 56 yeares, or they that are vnder 14 yeares of Age; as also they that be exceeding Fat, or they that be very Leane.

After bleeding vse no violent Exercise, nor Sléepe not within sixe or 8 houres after.

To

To know the time of the Moones comming to the South any day of the yeare, for many good uses hereafter expressed.

FIrst, find the Age of the Moone; that is, how many dayes she is past the Change, to the day that you would know her Comming to the South, and with that enter this Table in the Columne under the title of The Moones Age; where having found the day of her Age, then right against it in the Columne under the title of Her comming to South, you shall haue the houre and minute of her comming to South.

The ☽. Age.		Her comming to South.

13	28	10	24
14	29	11	12
15	30	12	0

For Example.

The 12 day of Ianuary this yeare 1639. the Moone is 18 dayes old, with which I enter this Table vnder the title of The Moones age, and there I seeke out 18. and right against it in the Columne of Her comming to South, I finde two of the clocke and 24 min. which is the true time of her comming

ming to South that day in the Morning; for note that allwayes after the Full, she comes to the South from after Midnight, towards Noone-tide; But before the full, from Noone to midnight.

To know the houre of the Night by the Moone.

HAuing found as before, at what time the Moone commeth to South; Take a Sun-diall, and note at what houre therein, before or after 12 in the Diall, the shadow of the Moone pointeth out: for that wants, or is past the true houre of the night, so much as the houre of her comming to South is.

For Example. The said 12 day of January, finding the shadow of the Moone to point in the Sun-diall at 8 of the clocke, to which I adde three a clocke and 24 minutes, which is the time of her comming to South, and it makes 10 of the clock and 24 minutes, which is the true houre of the night at that time; But if she point out 3 in the Diall, then is it 3 houres past 2 in the morning: that is to say, 5 a clocke in the Morning: Note from the Change to the Full, you must abate so many houres as her comming to South is, from the houre that she pointeth out in the Diall, and the remainer is your desire.
